

**The International Conference on
Computational and Experimental Engineering and Sciences (ICCES'12)
April 30 – May 4, 2012 in Crete, Greece
www.icces.org**

Mini-symposium on:

Advanced Modeling and Experiments of Complex Engineering Systems

This mini-symposium aims to provide an opportunity for formal discussions on recent advances in modeling and experiments for a variety of complex engineering systems. Interested researchers are invited to submit short abstracts on related topics which include, but not limited to:

- Numerical/experimental characterization of high performance construction materials;
- Advanced analytical/computational methods and design for complex engineering systems (e.g., structural systems, geo-systems, transportation systems, etc.);
- Improved smart structures technologies for civil infra-structures;
- Newly developed cement-based material technologies and applications;
- Performance prediction/experiment/monitoring of infrastructures with smart materials.

Mini-symposium Organizers:

H.J. Jung, Associate Professor
KAIST (Korea Advanced Institute of Science & Technology)
Department of Civil and Environmental Engineering
Daejeon 305-701, South Korea
Tel: +82-42-350-3626
Email: hjung@kaist.ac.kr

H.K. Lee, Professor
KAIST (Korea Advanced Institute of Science & Technology)
Department of Civil and Environmental Engineering
Daejeon 305-701, South Korea
Tel: +82-42-350-3623
Email: leeh@kaist.ac.kr

S.R. Lee, Professor
KAIST (Korea Advanced Institute of Science & Technology)
Department of Civil and Environmental Engineering
Daejeon 305-701, South Korea
Tel: +82-42-350-3617
Email: srlee@kaist.ac.kr
